

Dr. Daniel Cheney

Pacific Shellfish Institute (PSI) Executive Director and Senior Scientist

Dan specializes in marine benthic ecology, aquaculture systems, environmental impact analysis, and coastal resource management and inventories. His research activities address summer mortality disease of oysters, intertidal geoduck production systems, ecological interactions of shellfish culture with the natural environment, assessment of methods to control invasive and pest species, and heavy metal and bacterial contaminants in shellfish. Dan has extensive project work experience in the south and western Pacific, Belize, Oman, Bahrain, Bangladesh and numerous other countries. He also maintains a small consulting business which focuses on marine environmental services for ports, marinas, and fish processing facilities. Dan received a B.S. and Ph.D. in Fisheries from the University of Washington and a M.S. in Zoology from the University of Hawaii. He resides with his wife, Lois, in Olympia, in a home several hundred feet above sea level.
